**Introduction to Volume I**

This is the ninth in a series of reports on the demographic makeup of Top 10% students entering The University of Texas at Austin. These reports were developed to provide easy access to understandable data for the press, the general public, policy analysts, political decision-makers, and fellow academicians.

The Texas Top 10% Law (HB 588) requires the automatic admission of any student graduating in the top 10% of an accredited Texas high school.

As in past reports, the entering summer/fall class of 1996 is a comparison group. It was the last year in which students were admitted under a classic admissions model using affirmative action to assist in the accomplishment of the University's diversity goals.<sup>1</sup> (Affirmative Action was re-introduced to the admissions process with the entering class of 2005.) The continuation and graduation rates of these students are illustrated in a companion to this report.

*This paper is designed to present simple, descriptive statistics relative to graduates of Texas high schools matriculating as entering freshmen from 1996-2006. This is not a position paper. It is not an evaluation of past or present affirmative action policies. It is not a proposed blueprint for other universities or public institutions seeking diversity. It is not representative of the higher education experience in all of Texas. It is merely another chapter about what has happened at The University of Texas at Austin the year before the interruption of affirmative action (1996), the years in which there was no affirmative action (1997-2004), and its return (2005 and 2006).*

## **Admissions at The University of Texas at Austin**

During the years immediately preceding *Hopwood*, The University of Texas used what has been described as a "Classic Model" for making admissions decisions. It included factors that allowed for the easy and efficient processing of very large numbers of applications. Decisions were made after distributing students in descending order based on a predicted freshman grade point average. The prediction formula, a multiple regression equation, relied on the combined SAT score (or a concorded ACT score) and high school class rank. The ACT/SAT, like virtually all standardized tests at all levels of education, has a well-documented history of differential performance gaps among socio-economic, gender, and racial-ethnic groups.<sup>2</sup> Strict adherence to such a mechanical procedure would have produced classes with unacceptably low diversity levels, and thus, adversely impacting the educational experience for all students. At the time, in order to enroll a freshman class bearing some resemblance to the state itself, the University used affirmative action. This policy was in place until *Hopwood* forced its removal in 1997. The last freshman class admitted to UT Austin under such a classic model was for summer/fall of 1996.

With the entering class of 1997, the University's admission policy expanded to include the following factors:

### **1. The Academic Index (AI)**

#### **High School Record:**

- Class rank
- Completion of UT required high school curriculum
- Extent to which students exceed the UT required units
- SAT/ACT score

### **2. The Personal Achievement Index (PAI)**

#### **Scores on two essays**

#### **Leadership**

#### **Extracurricular Activities**

#### **Awards/honors**

#### **Work experience**

#### **Service to school or community**

#### **Special circumstances:**

##### **Socio-economic status of family**

##### **Single parent home**

##### **Language spoken at home**

##### **Family responsibilities**

##### **Socio-economic status of school attended**

##### **Average SAT/ACT of school attended in relation to student's own SAT/ACT**

Beginning with the entering class of 2005, race/ethnicity was added to the list of special circumstances. Test scores and class rank are still considered, but the ambition to tackle rigorous high school coursework, the production of quality prose, the desire to make a difference in one's school, home, or community, evidence of employability (work), and some sense of having excelled in any number of areas are also considered. Moreover, admissions officials place these attributes in the context of the circumstances under which the student lived. Since 1997, the rational, thoughtful, and reasoned judgments of people complemented prediction formulas. Throughout the United States this is called the "holistic approach." The University of Texas implemented an admissions routine that analyzes the qualities each applicant would bring to an entering freshman class.

## Demographic Analysis—1996-2006

Table 1 below illustrates the numbers of applicants, admits, and enrolled students from 1996 through 2006. Throughout this report, n-counts include first-time freshmen for the fall plus those entering during the preceding summer and continuing into the fall. Since the size of the entering classes ranges from 6430 to 7935 it is most appropriate to focus on percentages.

**Important note: Table 1 and Table 2 are the only tables illustrating all first-time freshmen. Table 1a, 2a, 3 and those that follow illustrate the graduates of Texas high schools only. Graduates of Texas high schools are isolated because HB 588 grants an automatic admission entitlement only to graduates of public and accredited non-public high schools in Texas. For this reason, the n-counts and other data reported here will not match official first time freshman data reported by the Office of Institutional Research in its Statistical Handbook.**

Notes to researchers:

Concise descriptions of UT Austin's admissions policies by year are as follows:

- 1996—The Classic Admissions model (as described above) including ACT/SAT/class rank with an affirmative action plan.
- 1997—Use of the "AI" (as described above), the "PAI" (as described above), with an institutional policy admitting the top 10%, and no affirmative action policy—the result of the *Hopwood* decision.
- 1998-2004—Use of the "AI", the "PAI", with HB 588 mandated automatic admission of the top 10%, and no affirmative action policy—the result of the *Hopwood* decision.
- 2005—Use of the "AI", the "PAI", with HB 588 mandated automatic admission of the top 10%, and the reinstatement of affirmative action (as described above)—the result of the *Grutter* decision.

***Drops in SAT averages from 2005 to 2006 were common throughout the US, especially for large institutions, and was due in part to changes made on the SAT 1: Reasoning Test. Students in the 2006 cohort were the first class to take the "New SAT," which was 40 minutes longer, included a 25-minute writing sample, and much more expensive (from \$25 to \$41). The College Board reports that nationwide and institution-level score declines are likely the result of dramatically reduced multiple test-taking by students. Multiple test-taking usually results in higher scores for an individual. The average ACT Composite score, a test that did not change or see any change in test-taking behaviors in its population, remained steady at 26.<sup>3</sup>***

<sup>1</sup> See the text of HB 588 on the University of Texas Admissions Research website at: <http://www.utexas.edu/student/research/reports/admissions/HB588Law.htm>. For a more in depth discussion of the Classic Model of Admissions see Bruce Walker and Gary Lavergne, "Affirmative Action and Percentage Plans", *College Board Review*, May 2001 no. 193, p. 18-23.

<sup>2</sup> Throughout their histories, both the SAT and the ACT have recorded gaps in mean scores among different racial/ethnic groups and by household incomes. The annual report for the SAT is called the *College-Bound Senior Report* and the ACT is called the *ACT Profile*. These reports are issued nationally and by state.

Table 7a  
 SAT MEAN AND FRESHMAN GPA BY UNDERGRADUATE COLLEGES AND ETHNICITY  
 Entering 1996

Note: N-counts below represent students with a college admissions test score. SAT means represent SAT combined scores and concorded ACT scores. As is the case with the UT admissions routine, students submitting more than one set of scores were given the benefit of the best performance from a single test date. Students with no hours toward a GPA were excluded from the computation of the GPA mean. On very rare occasions students are admitted as freshmen to Pharmacy. Those are included in the total but are not listed.
